

Leverage the Benefits of Infrastructure as a Service (IaaS)

Gain peace of mind and focus on your business by leveraging Cloud at Work for the ultimate cloud experience and confidence.

As a business, your IT environment may be taking up more of your time, money, and resources than you realize. Migrating your core technologies to Cloud at Work's Microsoft Azure managed cloud can free you from the expenses and constraints of outdated servers, costly hardware, and threats to your data and security.

Organizations like yours are moving to the cloud to meet critical business objectives.

Better Security

Increase Performance

Increase Business Agility

Reduce / Control Costs

Improve Availability and Recovery

Improve Customer Experience

Faster Time to Market

Expand Geographical Reach

Support Hybrid Work

IaaS at Work™

Infrastructure as a Service (IaaS) is a cloud computing model that provides on-demand access to computing resources like storage, networks, servers, and virtualization. In addition to offering *VPC at Work™* where clients migrate their on-premises Sage ERP to Cloud at Work's Virtual Private Cloud (VPC), our *IaaS at Work* solution facilitates the migration and hosting of additional applications and workloads to the Azure cloud platform, ensuring scalability and reliability. With *IaaS at Work*, clients can continue to modernize their IT and in the process, reclaim the time and resources to focus on the mission of their business.

Your Partner for Digital Transformation

Microsoft Azure is a powerful and flexible cloud platform that enables businesses to affordably extend their infrastructure, build and deploy apps, manage data and storage, and unlock powerful business insights. By partnering with Cloud at Work, organizations can leverage all that Azure has to offer, but without the need to build and manage the infrastructure.

Highlights of Azure Infrastructure managed by Cloud at Work include:

Migration: We provide expert migration services so you can move any portion of your on-premises environment to the cloud with ease.

Scalability and Cost Savings: Your Azure environment can easily scale up or down to meet your storage, bandwidth, and uptime needs.

Managed Cloud Infrastructure: Not worrying about managing SLAs, hardware, and datacenter, means you can focus on other priorities like growing and investing in your business. Our team of cloud experts do the heavy lifting for functions such as maintenance, systems monitoring, reporting, and technical support, while always keeping you informed about what’s happening with your infrastructure.

World-Class Security: Azure cloud computing software is deployed across a global network of data centers backed by Microsoft to meet rigorous privacy, compliance, security, conditional access policies, and performance standards.

Hybrid Cloud Storage: Host a variety of workloads in Azure while keeping Sage in Cloud at Work’s Virtual Private Cloud (VPC). If requested, Sage can alternatively be hosted in Azure. If you can’t completely go to cloud, you can still extend your IT and spend less using Azure with access to a hybrid database and storage solutions with built-in data security and encryption features.

Peace of Mind with Unlimited NOC Support: You can rest assured that your IT environments and data are kept safe on secure servers with no single point of failure. Our skilled architects and administrators respond to alerts and resolve issues 24/7 across North America.

Cloud at Work - Cloud Comparison Matrix

VPC@Work IaaS@Work

Cloud Type	Dedicated Virtual	Public
Environment	CAW VPC	MS Azure
Fully Managed	Yes	Yes
Monthly Fee	\$\$\$	\$\$
